Office Action Summary	Application No. 10/036,566	Applicant(s) HORVITZ ET AL.	
	Examiner Alina N. Boutah	Art Unit 2143	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 11 January 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 18, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37-39, 41, 42, 45-47 and 69 is/are pending in the application.
- 4a) Of the above claim(s) 69 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 18, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37-39, 41, 42, 45-47 and 69 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

This action is in response to Applicant's amendment filed January 11, 2006. Claims 1, 18, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37- 39, 41, 42, 45-47 and 69 are pending in the present application.

Information Disclosure Statement

The information disclosure statement filed February 15, 2006 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered because Applicant fails to provide each non-patent literature publication listed. Applicant has also failed to provide the non-patented literature listed in the IDS filed March 5, 2002.

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Terminal Disclaimer

The terminal disclaimer filed on January 11, 2006 disclaiming the terminal portion of any patent granted on this application, which would extend beyond the expiration date of Patent Application Number 11/047,068 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 45 is rejected under 35 U.S.C. 101 because the claimed invention is not supported by either a specific and substantial asserted utility or a well-established utility.

The specification fails to define “a computer useable medium” as claimed.

Claim 45 is also rejected under 35 U.S.C. 112, first paragraph. Specifically, since the claimed invention is not supported by either a specific and substantial asserted utility or a well established utility for the reasons set forth above, one skilled in the art clearly would not know how to use the claimed invention.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2143

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 18, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37-39, 41, 42, 45-47 and 69 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 2002/0156879 submitted by Delany et al. (hereinafter referred to as Delany) in view of US 2003/0033421 by Haeri et al. (hereinafter Haeri) in further view of USPN 6,671,695 in view of McFadden.

(Amended) Regarding claim 1, Delany teaches a computer-based system that facilitates optimizing utility of a communication, the system comprising:

a communication group manager that manages a group of communicating parties to facilitate optimizing the utility of the communication along a communication channel identified by the identifier [figures 3, 5, 8-10, 26, abstract]; and

a group wise communication coordinator that coordinates communication between a subset of the managed group of communicating parties to facilitate maximizing the utility of the communication [figures 3, 5, 8-10, abstract].

However, although Delany discloses communication along a communication channel [0360], he fails to explicitly teach an identifier that identifies one or more communication channel that facilitates maximizing the utility of the communication. Haeri teaches identifying one or more communication channel that facilitates maximizing the utility of the communication (figures 4, 7 and 9; table 1; 0016). At the time the invention was made, one of ordinary skill in the art would have been motivated to identify a communication channel that facilitates maximizing the utility of the communication in order to allocate bandwidth to certain group of communication parties, thus maximizing the system's efficiency.

Delany also fails to explicitly disclose the membership of the group communicating parties being based at least in part on a reciprocated communication history between entities that comprise the group. McFadden teaches this limitation in col. 1, lines 24-46, col. 2, lines 15-23 and col. 5, lines 11-25. At the time the invention was made, one of ordinary skill in the art would have been motivated to incorporate the teaching of McFadden into the teachings of Delany in order to set criteria for identifying an individual member in the group.

Regarding claim 18, Delany teaches the system of claim 1, where the communication occurs between one or more contactors and one or more contactees and where the identifier comprises:

- a processor [0016];

- a preference resolver that analyzes a contactee preference data and a contactor preference data and produces a resolved preference data [0109];

- a context analyzer that analyzes a contactee context data and a contactor context data and produces an analyzed context data [table 3]; and

- a communication establisher that establishes a communication between the contactor and the contactee based, at least in part on the resolved preference data that analyzed context data communicating party selection data and the communication channel data [360].

However, Delany fails to explicitly teach a channel analyzer that analyzes one or more communication channels between a contactor and a contactee and produces a communication channel data. Haeri teaches a channel analyzer that analyzes one or more communication channels between a contactor and a contactee and produces a communication channel data

Art Unit: 2143

(figures 4, 7 and 9; table 1; 0016). At the time the invention was made, one of ordinary skill in the art would have been motivated to employ a channel analyzer in order to allocate bandwidth to certain group of communication parties, thus maximizing the system's efficiency.

Regarding claim 19, Delany teaches the system of claim 1, the utility optimization based at least in part upon whether two or more communication parties are concurrently engaged in a related activity, or are likely to become concurrently engaged in a related activity [112].

Regarding claim 21, Delany teaches the system of claim 1, the utility optimization based at least in part upon whether two or more communicating parties are concurrently processing one or more related documents, or are likely to concurrently process one or more related documents [112].

Regarding claim 23, Delany teaches the system of claim 1, the utility optimization based at least in part upon whether two or more communicating parties are concurrently processing one or more related documents, or are likely to concurrently process one or more related documents [112].

Regarding claim 25, Delany teaches the system of claim 1, the utility optimization based at least in part upon whether two or more communication parties are concurrently viewing one or more related documents, or are likely to concurrently view one or more related documents (figure 12).

Regarding claim 27, Delany teaches the system of claim 1, the utility optimization based at least in part upon whether two or more communicating parties are concurrently engaged in a shared project, or are likely to become concurrently engaged in a shared project [211].

Regarding claim 29, Delany teaches the system of claim 1, the utility optimization based at least in part upon whether two or more communicating parties are scheduled to communicate within a predefined period of time, or have communicated within a pre-determined period of time [308].

Regarding claim 31, Haeri teaches the system of claim 1, the utility optimization based at least in part upon whether two or more communicating parties are scheduled to meet within a pre-defined period of time, or have met within a pre-defined period of time [039].

Regarding claim 33, Delany teaches the system of claim 1, the utility optimization based at least in part upon whether a communicating party has engaged in one or more pre-defined activities of interest within a pre-defined period of time, or is likely to engage in one or more pre-defined activities of interest within a pre-defined period of time [114].

Regarding claim 37, Delany teaches the system of claim 1, the utility optimization based at least in part upon the degree to which a communicating party is trusted by one or more other communicating parties [485].

Regarding claim 38, although Delany and Haeri fail to disclose the computation of an expected utility for the communication using the claimed formula, Applicant has admitted that this was an example of a Bayesian network probabilistic model (see specification page 8, line 25 to page 9, line 19), therefore this feature is known in the art.

Regarding claim 39, Delany teaches the system of claim 1, where the utility of communication is based at least one of a cost and a benefit of the communication to at least one of a contactor and a contactee; wherein at least one of the cost and the benefit of the communication is related to one or more preferences of at least one of the contactor and the contactee [403].

Regarding claim 41, Delany teaches the system of claim 39, where a utility function employed to compute the utility of the communication is a combination of functions that separately consider at least one of the cost and the benefit of the communication to at least one of the contactor and contactee [403].

Regarding claim 42, Delany teaches the system of claim 39, where a utility function employed to compute the utility of the communication is a multi-linear combination of one or more weighted terms associated with at least one of the contactor and contactee (figure 26).

Art Unit: 2143

Regarding claim 45, the combination of Delany and Haeri teaches a computer useable medium having embodied thereon computer executable components of the system of claim 1 (see the cited areas above).

Regarding claim 46, Delany teaches the system of claim 1 where the group wise communication coordinator comprises: a group wise communication assembler that assembles the group communicating parties, and a group wise communication scheduler that schedules a time for the group communication that maximizes the utility of the communication [figures 3, 5, 8-10, abstract].

Regarding claim 47, the system of claim 46, where the group wise communication assembler identifies one or more group member classification required for the group communication; identifies a minimal number of communicating parties from each of the one or more group member classification required for the group communication, and verifies that at least the minimal number of communicating parties from each of the one or more group member classifications are available for the group communication [abstract, 0011, 0016, 0039].

Claim 69 has similar limitation as claim 1, therefore is rejected under the same rationale.

Response to Arguments

Applicant's arguments have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in further view of McFadden.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alina N. Boutah whose telephone number is 571-272-3908. The examiner can normally be reached on Monday-Friday (9:00 am - 5:00 pm).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David A. Wiley can be reached on 571-272-3923. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
